The first roller dynamometer for commercial vehicles in Strykowo (Poland)

Although the official opening is planned for mid-May, from mid-February, Mercedes-Benz customers will be serviced in the new showroom and service in Strykowo near Lodz (at the junction of A1 and A2).

The new station has more than 8,500 square meters of built-up area and will offer all services for commercial vehicles, including the first network in the Polish Mercedes roller dynamometer for cars and trucks with GVW over 3.5 tonnes. So far, the closest points were in Chemnitz and Dresden, Germany. Motor dynamometer with an area of 192 square meters will also be open to customers from the East.

In addition to the roller dynamometer, the point will have in stock replacement parts, bodyshop, paint, tire service, car wash and service station which is a District Vehicle Inspection Station. The service will also includes our workshops and warehouses, such as storage of oils, repair of tachographs, welding shop, repair workshop, electrical and plumbing and service trailers. The service is to be employed 29 people from a total of 70 employees.

TTM - Automotive from A to Z

Only months separate us from the big event created for professionals in the automotive industry. Automotive Technology fair dedicated to experts will attract many people from Poland and abroad to Poznan (Poland) between 12 - May 15 Polish. Program will be very interested for professionals. You will find there market novalties as well as the opportunity to exchange experiences on latest technology used in automotive engineering.

T - as the technological innovations

TTM topics include wide-range vehicle diagnostics, shop car wash and vulcanization. Event will attend the leaders of automotive sector, leading manufacturers, distributors and service providers associated with the automotive industry.

T - as the exhibition of young engineers

Show is an ideal opportunity for profes-

sionals to work more closely with existing partners and attracting new customers. Besides, this is a place to promote the profession of engineer, and painter among young people.

Friday, May 13, will be the day on which students and teachers of schools educating future professionals will be especifically welcomed.

M - as automotive know-how

Knowing the importance of practical knowledge relating to the modern workshop, organizers want to bring the latest technical solutions used in the repairs by mechanics and painters. For this purpose, together with partners, are organized special demonstration space where everyone can see how the repair process.

TTM Fair - in a nutshell

- Exhibition period: 12 15 05. 2011
- Exhibition opening hours: 9.00 17.00

The magazine is also adressed to a large group of drivers who are interested in automotive matters. • Circulation: 15-20 thousand copies • Distribution system:direct mailing • Format: A3

New car registration in February 2011

In Poland, in February 2011 were registered 24.7 thousand of new cars and vans up to 3.5 tones, about 800 more than in February 2010.

Despite this growth, the market in late February is still lower by 1.1 thousand. compared to last year.

Individuals registered 13.9 thousand vehicles in February, about 900 units more than last year. As a result, in January-February there was a slight, but still increase in this segment of the market of almost 300 pieces. The leader is deffinetelly Fiat, but his advantage over the Skoda is melting.

Third place, same as last year, has Opel, while the fourth -

Hyundai. In addition to already mentioned Skoda and Hyundai, needs to be highlighted appearance in the TOP 10 two brands: Chevrolet (up 57% and 7th position) and Nissan (up 42% and 10th position).

In January-February 2011 the most popular among individuals are Octavia and Fabia and the Fiat Punto, all three models boast an have almost identical number of registrations. It is worth to emphazise the appearance of the Kii C'eed and Hyundai

i30 models, in the place of two other Korean brand Kia Venga (9th position) and the Hyundai i20 (10th position).

Companies registered in February, 10.8 thousand vehicles, so 130 units less than a year ago. In January-February period, this segment has decreased by 1.3 thousand. or -6.4%. The first two places are occupied, like last year, by Skoda and Ford, both of these brands registered decrease by 11% and 7%. The third place for Renault, which began the year from the 18% growth. The largest decrease notes Toyota, whose registrations decline by 1/3 and that drops to 6 places in the ranking of brands.

In January-February 2011 most of the companies registered the Skoda Octavia and Fabia as well as Opel Astra. Among the 10 models the most popular this year appear typically commercial models like Fiat Ducato (7 position) and Renault Master (10 position).

in the poorer outcome of tire companies.

Tyre company from the Stock Exchange accelerate

Producers and sellers of tires from the Stock market in Poland positively surprised their shareholders last year. Each of the public companies in this industry in 2010, improved their results, in some cases - increased revenues and doubled their profits. What makes that situation has evolved?

Managers point to several factors. First of all tire companies helped demand for their products.

Commentators indicate that strong, even in times of crisis, demand has been supported through individual contracts from companies that after a period of belttightening in 2009 in 2010 could afford little higher expenses. Polish tire companies also help a better situation in the global tire market. Debica benefited the most, exporting most of their products. Demand for tires crucial to the outcome of tire companies, was not the only factor which determines their increasingly better financial results.

Stock market companies in 2010 strengthened their position in the market, taking away their rivals part of the tire cake. Representatives of stock market companies,

admit that their presence on the market is very helpfull. What they expect after 2011? Representatives of the industry with cautious optimism looking to the future. On one hand, the winter season, according to their evaluations, was successful in quantity of tires sold and prices obtained.

As in previous years strong demand from individual customers was very successful, the companies invest in tire, improving tires sales results for trucks. On the other hand, there are some opinions on the market that the unstable political situation in Africa and the Middle East can be found reflected

Why? Concerns of tire companies relate especially tire production costs, depend on commodity prices in the market, which are strongly influenced by the political situation in the oil producing countries. Civil War and the disorder in Libya and in the countries of the Persian Gulf, increases the price of "black gold" to a level not recorded since mid-2008. For a barrel of Brent crude oil, extracted from the North Sea, counted almost 120 dollars., and a barrel of American oil - almost 105 dollars. More expensive oil increases the cost of transport, as well as prices of petroleum products used in tire production. Tyre manufacturers are observing with concern the situation in the rubber market. Analysts predict that, even that this material became cheaper, prices may increase by at least 30 %, by December this year to 7 dollars per ton. Poor harvest among the largest producers of natural rubber may affect such situation. This time, it may be difficult, if commodity price increases will be accompanied by the weakening of the zloty (Polish currency).

"Do not mess with the law..."

...titled the action, seeking to improve degree of compliance Polish regulations on the universal application of water-based paints when painting cars, according to european directive introduced into the polish law in 2007. The main reasons for failure to comply with the directive by a lot of Polish painting workshop is confusion and doubts about the interpretation of Polish law, and exactly mislead multilayer coatings classi-

fication with a metallic and pearl effect to "special coatings" and what is even more important, the total inactivity of the control authorities in Poland established to monitor companies routinely breaking the law. About how such action is required may provide the first market statistics, which show that participation in the Polish market for "legitimate" water paint is currently only 31 percent. For comparison, Western European markets share 83 percent. Action will be composed with lobbying directed toward the clarification and law changes, and to highlight inactivity of control authorities in this area and support marketing activities. The duration of the action is scheduled for several months.

The organizers are the Association of Car Dealers with the support of the biggest companies producing and distributing paint products. Press patrons are "Modern Workshop, ""Monthly Dealer" and portal Warsztat.pl.

Castrol EDGE supports Polish automotive industry

March 23, 2011 in Warsaw held a press breakfast. Six players supported by the Castrol EDGE told about plans and purposes in 2011. That group consist of polish players and automobile enthusiasts reaching success in the international arena. Among them are the race drivers, off-road enthusiasts, European record holder in street racing and trooper with a penchant for single track.

- Castrol EDGE supports not only a global sport, but also a Polish automotive industry – said Dorota Staszewska, manager Castrol sponsorship Poland. - Sponsorship of sport is an integral part of our corporate strategy. The presence in motorsport builds brand image. Outside the automotive industry for several years we are supporting football, which helps us reach a wide audience.

What are you planning to invest in your workshop in 2011?

On the basis on survey on the portal Warsztat.pl

New questionnaire on the portal Warsztat.pl

Warsztat.pl website team conducted a new questionnaire in Poland, entitled "What are you planning to invest in your workshop in 2011?."Thanks to this survey you can see if and what investments are planned by Polish mechanics. The test results are very optimistic for the workshop industry - most of respondents planning to develop their workshops. Please refer to the survey results.

Line behind the bars – car leasing in Poland in 2010

Car leasing market in 2010.was driven by commonly called: the bar. . Massive sales of some popular car models with the "bar" was caused by the announcement suspension for two years, opportunities to fully deduct VAT included in the new car has risen so much that some companies are still waiting for ordered and paid vehicles until December 31. According to a report published in the annual "Fleet Contact 2011 - Vademecum of company car"in whole 2010 were registered 97 266 cars with "the bar". It's about 112 percent more than in 2009. More than 40 thousand. vehicles have been financed by the lessor, and the total value of lease receivables amounted to 55.35 billion zł.

Leasing market in 2010 grew by 19 percent. and taking into account only the movable property, the increase was as high as 23 percent. The main pillars of market recovery was a good light-vehicle sale - an increase of 28.8 percent. and even better situation in the segment of trucks - an increase of 32.6 percent. Sales of other vehicles, reported a jump of 21.2 percent. Total number of leases of new vehicles financed by members of the Polish Association of Leasing in 2010 increased by 29.5 percent

Companies affiliated in the Polish Rent and Leasing Association, which gather companies penetrating ¾ leasing market in

Poland, together after the four quarters of 2010 handled 83 274 vehicles. 69 132 vehicles from this number is covered by a full lease FSL (Full Service Leasing or combination of vehicle management and finance in the form of leasing). Other vehicles are managed in the system of FM (Fleet Management) - 9 335 cars and leasing service - 4 807 vehicles.

At the end of 2010, members of the ZPL and PZWLP provided 103 271 vehicles to their customers. This menas an increase of 14.3 percent compare to the end of 2009.

Thanks to very good results of the leasing sector in the second half of 2010 - ZPL analysts predicts, good economic prosperi-

ty in the end of the year. In addition, Poland still has great potential for vehicle leasing. Our market is able to absorb about 0.5 million vehicles, whereas today this number is between 80 - 120 thousand.

Leasing of light cars in 2011 will be lower due strong sales of cars with "the bar" at the end of 2010, ZPL provides that in this market segment, which also includes commercial vehicles up to 3.5 t will drop about 5 percent. The significant increase, because at around 29 percent, should be record in the truck segment, which is still the main engine of the lease. ZPL predicts that in 2011 the leasing industry in Poland will grow by about 13 percent.

Car production in Poland - January 2011

In January, production of passanger cars and trucks in Poland amounted to 68 829 units. Compared to January last year decreased by 7.59%. A leader among manufacturers remains Fiat Auto Poland, but the most dynamic growth has Volkswagen Poznań. In January 2011, production of passenger cars and commercial vehicles in Poland amounted to 68 829 units, an increase of 3.60% (2 391 units) compared to December 2010. Compared to January last year the domestic production dropped by 7.59% (5 656 cars).

Passanger Cars

Production of passanger cars in January 2011 was 60 478 units, about 4.11% more than in the previous month and 12.65% less than last year. Only 1.77% January's pro-

duction went to the local market (last year it was 2.24%). In January 2011, the largest number of passenger cars produced by Fiat (38 929 units, -24.96%). Leader in the ranking of models produced in Poland is Fiat Panda (18 523 units), the others are: 500 (14 111 units) and Opel Astra IV (9 792 pieces). Opel during the year increased its market share about 4.32 pproc. and now represents 18.13% of the market, Fiat shares 64.37% of the market, Volkswagen increased its share by 6.24 pproc. to 13.06%, and the FSO remained at 4.44%.

Commercial Vehicles

Production of commercial vehicles in January 2011 was 8 351 units. The result is 0.05% higher than a month earlier and up to 59.10% higher than that recorded a year earlier. The undisputed leader in commercial vehicles is Volkswagen Poznan. The share of the producer's market is currently 69.01% and 17.54% less than a year earlier. Volkswagen has produced 5 763 vehicles, with 26.85% more than a year earlier, Fiat - 2 588 units, with 266.57% more than last year. The most popular model, which was produced mostly in Poland since the beginning is the VW Caddy - 4 854 pieces, representing 84.23% of the German company. 97.45% commercial vehicles, produced in January 2011 in Poland were exported (8 138 units), with only 2.55% (only 213 units) remained in the country (in 2010 these proportions were 97.22%: 2, 78%).
